Introduction

Thank you for downloading this Grand Theft Auto V modification, I hope that you will enjoy using it and that you will come back for more! This modification is made by Elle Modding with the 3D model originating from Squir3D, this is also our first public release!

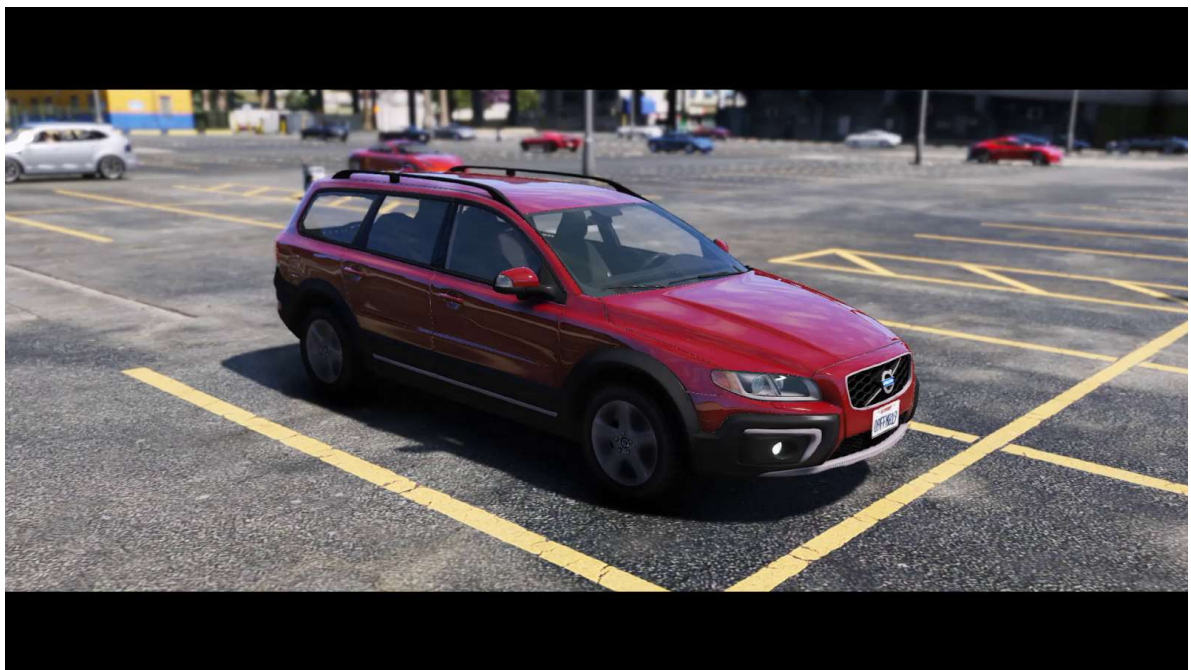

Even though this is the first public release, this is a long way from our first modification. We have been and are selling all our other modifications for those who are interested, the reason that we are releasing right now is that we want to give everyone a try of how our products behave.

Any illegal use or taking our work from us, such as Ripping, will not be tolerated. This will result in us not publicly releasing any more models and removing the existing ones!

Requirements

This modification requires the following software to be installed and to work properly:

- Grand Theft Auto V running on a Windows PC
- OpenIV 3.2
- Some type of Trainer or Menu

Installation

We are now going to install the modification so that it works properly in your game. Please make sure that all the requirements are installed before proceeding!

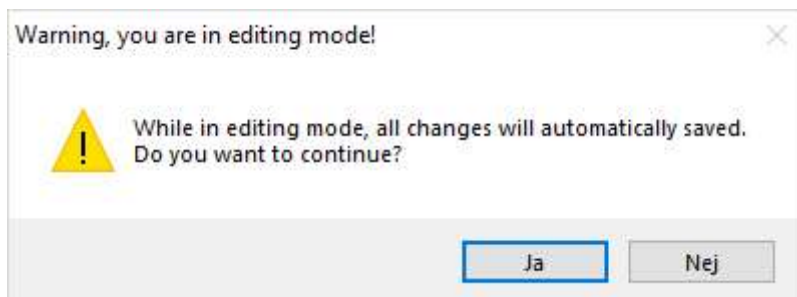

Worth to notice

if experiencing any issues or having problems installing, do not hesitate to contact Elle Modding and we will provide personal help until the problem is solved.

How to install

Make sure that your Grand Theft Auto is not running and start OpenIV, if you don't now how to install OpenIV, please look up a tutorial on how to do it.
You need to have a working mods folder for this to work.

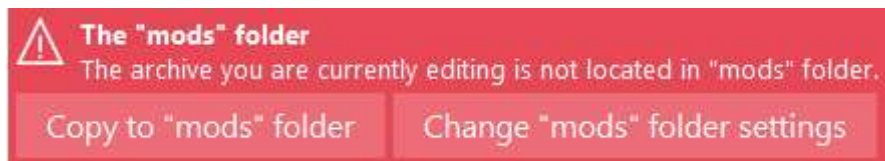

After OpenIV is started, turn on edit mode and click "Yes".

Locate to the following directory:

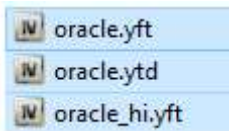

If this modification pops up, click Copy to "mods" folder button, it should then disappear.

Open the downloaded file and open up the directory of the car that you want to install.
You should see 3 files.

Select the files and drag them into the OpenIV directory.

If done properly, you should see the 3 files in the OpenIV directory.

Congratulations! The car is now installed and ready for use in the game!
